EDUCATION

KIET Group of Institutions	Ghaziabad, India
Bachelor of Technology, Computer Science & Engineering (AI)	Aug 2021 – Jun 2025

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, Node.js, Express, React, Next.js, Prisma
AI/ML: OpenAI (GPT-4o, embeddings), Deepgram (Nova-2, speaker diarization), Pinecone vector search, Vertex AI, Google Cloud Speech-to-Text
Cloud, Infra & Integrations: AWS (EC2, Lambda), Vercel, Docker, GCP, Firebase, Bull + Redis queues, node-cron, Google Calendar/Meet, Recall.ai, Razorpay, Brevo
Databases & Architecture: PostgreSQL, MongoDB, Redis, Pinecone; Microservices, Multi-tenancy, Vector Search

EXPERIENCE

Founding Engineer Experiment Labs	Nov 2024 – Present <i>Remote</i>
---	--

- **Architected recommendation engine** on OpenAI embeddings + Pinecone vector search — primary revenue driver, adopted by Leverage Edu and PhysicsWallah; powers personalized activity recommendations for student career roadmaps.
- **Shipped 10 production microservices** across ExperimentLabs’ edtech platform — core (Auth, CRM, Payments, Notifications), AI services (Recommendation Engine, Smart Meeting Assistant, AI Interviewer), and product modules (Internship Portal, Evaluator, Sales Operations Dashboard).
- **Designed central SSO/identity service** (auth-core: 92 Prisma models, 85 routes) powering all microservices — refactored permission model from 93 → 38 across 6 categories; multi-tenant org isolation via tenant-keyed queries.
- **Engineered Smart Meeting Assistant** — counselor–student session recording with AI summaries auto-pushed to student career roadmaps; Bull + Redis queues + Railway worker handle batch transcription across orgs.
- **Built AI Interviewer** end-to-end — Google Cloud Speech-to-Text for student answers, Vertex AI for adaptive question generation and scoring, async video transcoding via Cloud Tasks.
- **Delivered Payments and Notifications services** — Razorpay subscription billing with webhook reconciliation and Brevo transactional email with node-cron scheduled reminders.
- **Migrated long-running services (transcription, video processing, recommendation regeneration) from AWS Lambda to EC2**, eliminating serverless timeouts; added cron monitors for payment reconciliation (every 10 min) and meeting-link retries (every 30 min).
- **Shipped frontends end-to-end alongside backends** — 13+ React/Next.js surfaces including counselor CRM, AI Interviewer portal, ops dashboard, embeddable plugin, and marketing site (Next.js SSR).

OPEN SOURCE

Oppia Foundation (Quality Team Lead, Nov 2023 – Apr 2024) — led LaCE quality team, shipped 10 PRs across admin acceptance tests and UI fixes.
CircuitVerse — fixed searchbar overlap bug and improved profile page responsiveness.
Zowe — contributed to Linux Foundation’s open mainframe platform (zlux-server-framework).
Tailcall — fixed critical search modal focus bug, earned \$150 bounty.

PROJECTS

Crelyzor — crelyzor.app | **React, Express.js, PostgreSQL, Redis, OpenAI, Deepgram**

- A productivity OS where identity, meetings, scheduling, and tasks are one connected system; AI links card contacts to meeting participants, auto-extracts tasks from transcripts, and answers questions over the full meeting history.
- **Built end-to-end meeting intelligence pipeline** — Deepgram Nova-2 transcription with speaker diarization, GPT-4o-mini extraction of summaries/action items, and streaming SSE chat (Ask AI) with full transcript context.
- **Built timezone-aware booking engine** — slot calculation across availability schedules, Google Calendar busy-time, and existing bookings; serializable transactions prevent double-booking race conditions.
- **Integrated Google Calendar bidirectionally** — OAuth, read sync for busy-time injection, write sync for event creation/cancellation, auto-generated Meet links; Recall.ai bots auto-join online meetings and feed into the same transcription pipeline.
- **Architected dual-frontend system** — React + Vite for the authenticated dashboard; Next.js for SSR public pages (card profiles, booking pages, shared meetings) with OG previews and vCard downloads.
